Q1. How do I get the app and pair the watch?

Please scan the QR code below to download the Da Fit App, or search for the app directly on the App Store or Google Play to download it.

Launch the Da Fit app, tap the icon  → **Add Device**, then select P125 from the list. When the **Bluetooth Pairing Request** appears, allow it to finish the pairing.

Q2. What devices are compatible? Do tablets or PCs work?

Works with smartphones running Android 9.0 / iOS 9.0 and above. Tablets and computers are not supported.

Q3. Is it hard to connect the APP for new users?

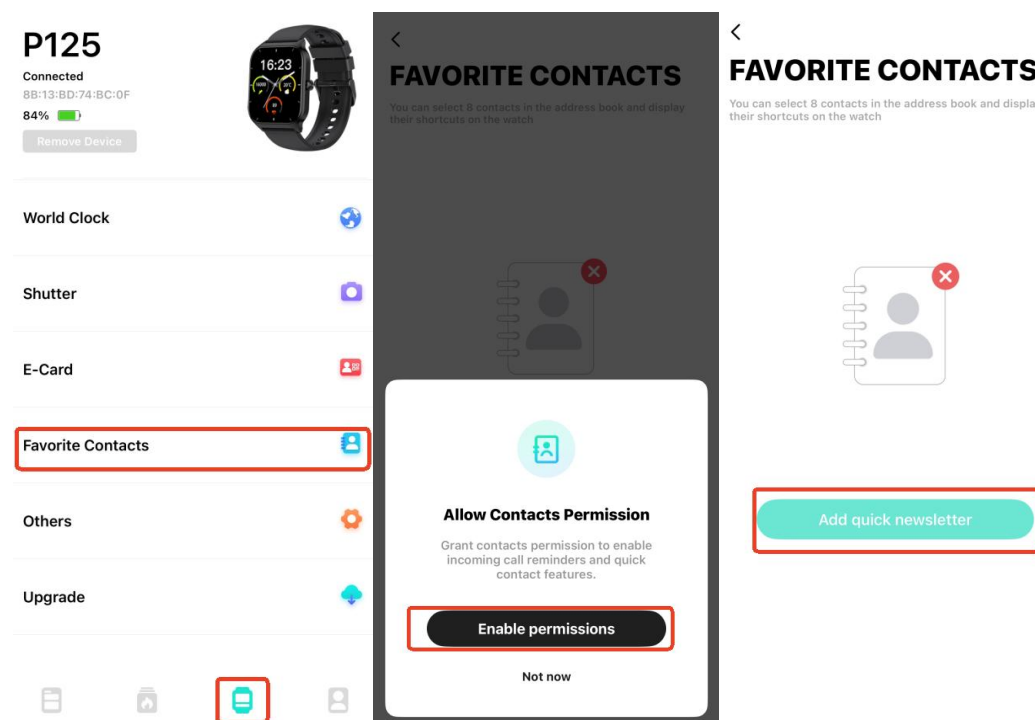

Easy pairing with Da Fit APP. We also offer lifelong technical support for any operation issues.

Q4. How do I use Bluetooth calling?

Once connected, quickly press the physical button on the watch's right side to open the menu. Swipe until you find **Phone Call**. There you'll see **Recent Calls**, **Dial Pad**, and **Contacts**. You can place calls directly from any of these three sections.

Inside the Da Fit app, tap  → **Favorite Contacts** → **Enable Contacts Permissions** → **Add quick newsletter**. You can store up to 8 contacts on the watch through the app.

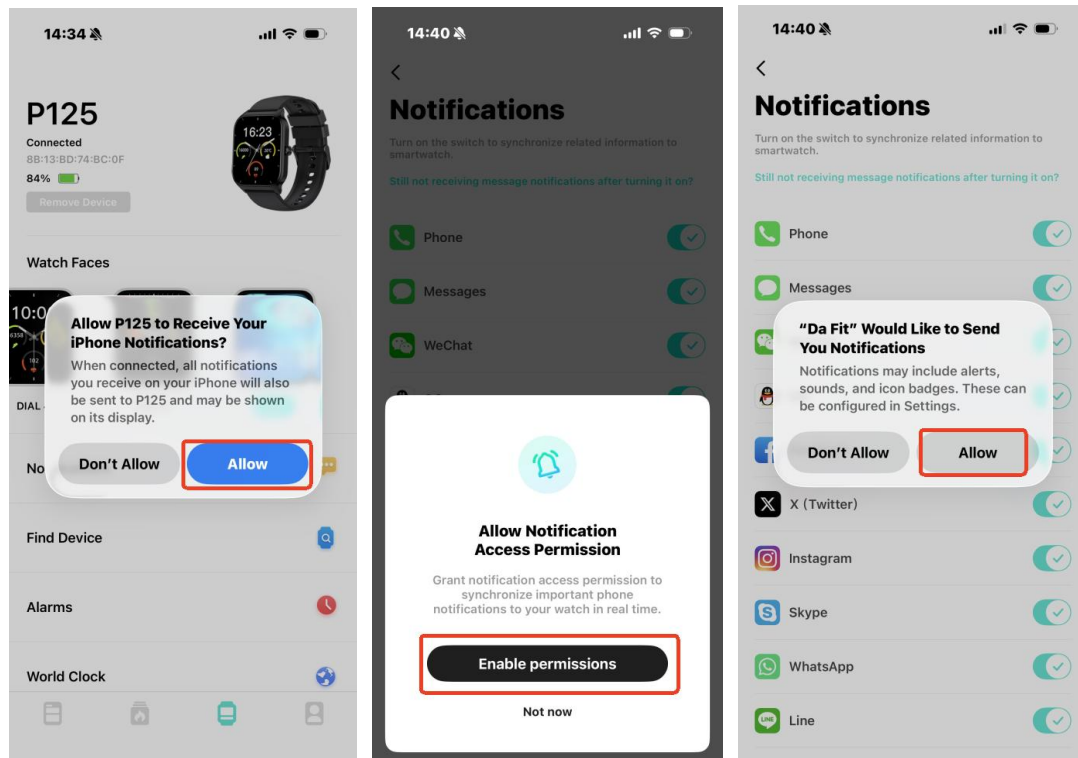

Note:

1. If Bluetooth calling doesn't work, verify the connection status inside the app and also check your phone's Bluetooth device list.
2. When Bluetooth calling is off, the watch can still notify you of incoming calls, but you won't be able to answer them from the watch.

Q5. How do I enable message notifications?

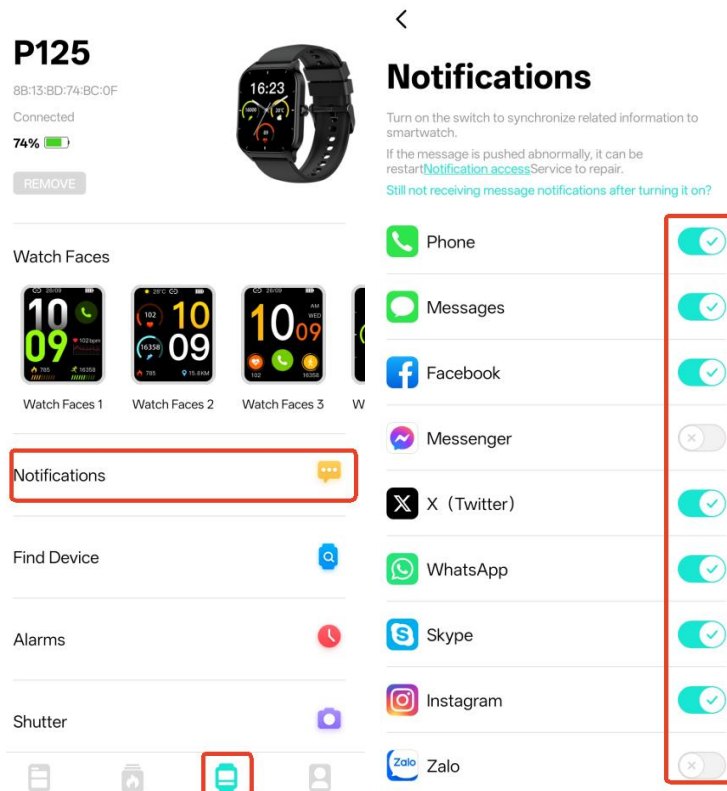

1. Initial setup: When pairing for the first time, grant all requested permissions.

Then open the Da Fit app, go to  → **Notifications**, and toggle on the apps you want to receive alerts from.

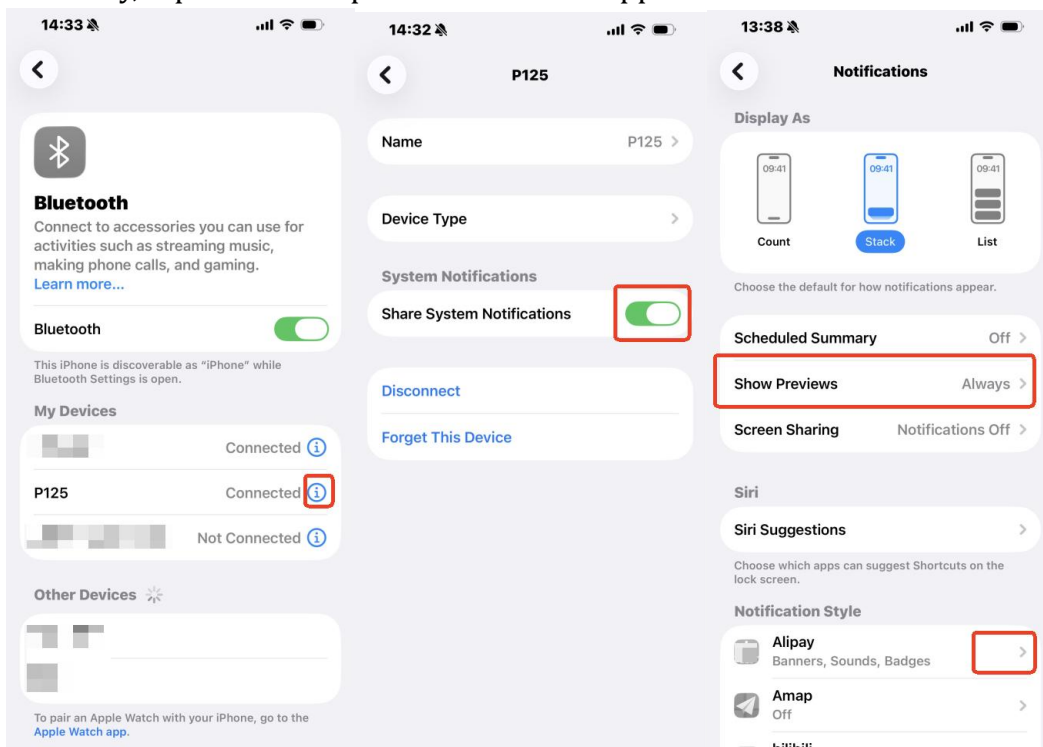

2. If you missed the permissions the first time:

Uninstall and reinstall the app, pair the watch again, and this time allow all requested permissions. Then follow the same steps above to turn on notifications for desired apps.

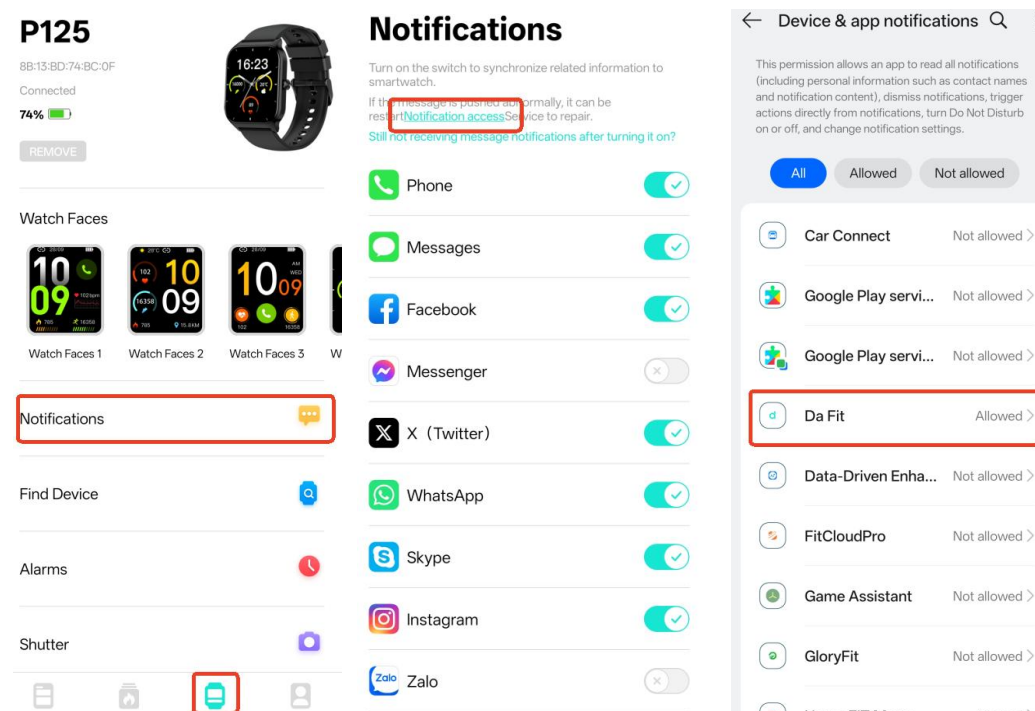

1) For iPhone users:

- First, in your **phone's Bluetooth settings**, turn on **Share System Notifications**.
- Then go to **Settings - Notifications - Show Previews - Always**. Under **Notification Style**, enable notifications for each app you care about.
- Finally, repeat the setup inside the Da Fit app as described above.

2) For Android users:

- In the Da Fit app, tap **Notifications - Notification access** and grant permission for Da Fit to read notifications.
- Open your phone's system **Settings → Notifications** and enable notifications for the apps you want.
- Then repeat the Da Fit setup as above.

Important:

- Menu names may differ slightly depending on your phone brand.
- The watch must be connected to both the Da Fit app and your phone's Bluetooth.
- The watch only shows messages that appear in your phone's notification bar.
- Keep the watch and phone within 5 meters of each other.

Q6. How can I get accurate health measurements?

The watch can measure **heart rate, blood pressure, blood oxygen, and stress levels**. For the best accuracy, follow these steps:

- In the app, enter your correct gender, height, weight, and age.
- Wear the watch about two finger-widths away from your wrist bone. If it's too loose or too tight, readings may be off.
- Rest your arm flat and relaxed, making sure the watch is snug against your skin.

Note:

Even with proper wear, factors like skin color, hair, tattoos, or scars can affect the results.

Q7. Are health data for medical use?

All tracking data is for daily fitness reference only, not a substitute for professional medical diagnosis.

Q8. How long does charging take and how can I maximize battery life?

The P125 has **a 300mAh battery**. Full charge takes **only 2.5 hours**. Normal usage **lasts 6–10 days**, and power-saving mode can extend it up to **30 days**.

1. Turn off continuous heart rate monitoring.
2. Disconnect Bluetooth when you're not using the watch.
3. Limit unnecessary app notifications.
4. Keep the watch firmware updated for better efficiency.
5. Lower screen brightness and reduce screen-on time.
6. Avoid fast chargers – use a standard charger instead.

Q9. What if the watch becomes unresponsive after being charged for a while?

1. Use the original charging cable and a standard charger. Make sure the charging contacts are clean and securely attached.
2. Press and hold the side button for 15–30 seconds until the logo appears or you feel a vibration. This usually fixes a temporary freeze.
3. If the battery is deeply drained, leave it charging continuously for at least 4–6 hours or longer – don't try to turn it on during that time. After several hours of charging, press and hold the side button again for 15–30 seconds to see if it responds.

Q10. Enough sports modes for professional workouts?

110+ built-in sports modes cover most indoor and outdoor exercises for general and professional users.

Q11. Can I wear it for swimming or bathing with IP68

waterproof?

It resists sweat, rain and hand washing only. Do not wear it for swimming, diving, sauna or long bathing to prevent internal damage.

Q12. How do I change the watch face?

On the watch itself:

Method 1: Long-press the home screen. The watch will vibrate and show available faces. Swipe left/right to choose one.

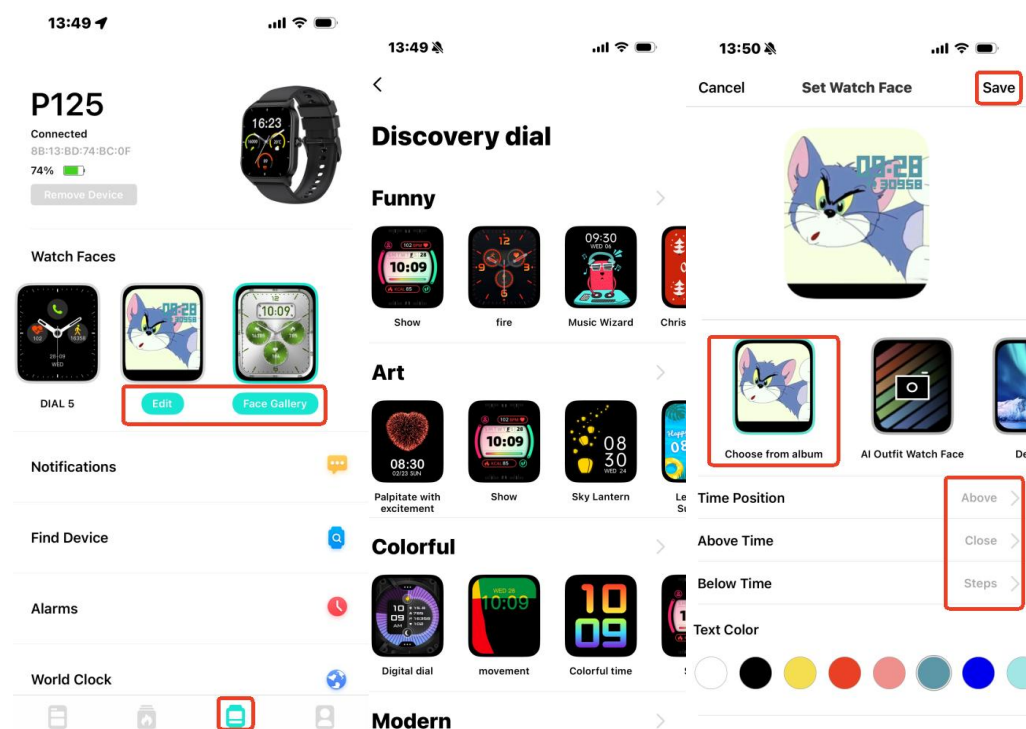

Method 2: Go to **Settings - Display - Watch Face**, then swipe left or right to select one.

Through the phone app Da Fit:

1. In the Da Fit app, on the device page, find the watch face section → swipe right → tap **Face Gallery** for more choices..

2. Or tap **Edit - Choose from album** to set a photo as your watch face. You can adjust the **time position**, **font color**, and choose to show extra info like **date**, **sleep**, **heart rate**, or **steps** above/below the time.

Q13. How do I change the watch language?

Open the Da Fit app, go to the device page, then select **Others → Language** and pick your preferred language.

Supported languages: Simplified Chinese, English, Japanese, Korean, German, French, Spanish, Arabic, Russian, Traditional Chinese, Ukrainian, Italian, Portuguese.

Q14. How do I add or remove shortcut pages on the watch?

From the watch home screen, swipe left until you see the "+" icon. Tap it, then choose shortcut cards like Activity Data, Sleep, Heart Rate, Blood Pressure, Blood Oxygen, Stress, or Weather.

To remove a shortcut page: long-press any of those function pages – it will shrink and a "-" icon will appear. Tap the "-" to delete that page.

Q15. How to use split screen?

Swipe right on the main screen to enter split-screen mode. A side bar will appear showing your most recently used functions. Tap any icon to jump directly to that function.

Q16. How to switch media audio?

Make sure the watch is stably connected to both the Da Fit app and your phone's Bluetooth. On the watch, go to **Settings** → **Phone**. You must enable the first option **Phone: on**. Once that's turned on, you can freely switch media audio between devices.

Q17. Will the large screen make the watch heavy?

It is lightweight for its size: 40.8g with silicone strap and 63.4g with metal strap. Lighter than most similar watches, no discomfort for long wear.

Q18. Only one strap style? Does it fit sports and daily wear?

Comes with 2 interchangeable 22mm straps. Silicone for sports & outdoor use; metal for business & daily outfits.

Q19. Is after-sales service reliable?

2-year free return & exchange, 24-hour order response and lifelong free technical support.
